Committee Members:
1. Dr. Daniel Andresen
2. Dr. Torben Amtoft
3. Dr. Mitchell L. Neilsen
The action items identified for the phase II of the MSE project Airline Reservation System are as follows:

- The class diagram was incorrect as it had a wrong symbol for the relationship between the different objects of the class diagram. So, the diagram has been modified and the correct diagram has been included in the component design document.
- The class diagram did not have relationships between the administrator class and the flight, package and hotel classes. I have included these relationships in the class diagram and have included the updated diagram in the component design document.
