The following are the action items that have been defined in the phase I of my project. They are listed as follows:

- The use cases for the Airline Reservation System were not numbered in the Vision document. So, I numbered them and corrected the document.

- The basis for assigning values to some of the effort adjustment factors was not mentioned clearly. So, I mentioned the reasons for selecting the values for some of the important factors.

- The explanation for some of the use cases was not very clear, so I gave a clear explanation of the use cases.
