3-dimensional matching, 527–531
abstract data type, 107
abstraction, 5
accessor operations, 116
Ackermann's function, 304
Adel'son-Vel'skiǐ, G. M, 205, 242
ADT, 107
Aho, A. V., 145, 288
Aigner, M., 373
aliasing, 145
Amdahl, G. M, 288
amortized analysis, 121–123, 129–139
Andersson, A., 242
approximation ratio, 563
Apt, K. R., 55
arbitrary precision arithmetic
  exponentiation, 369
  radix conversion, 369
arbitrary-precision arithmetic, 145,
  350–364
  division, 350–359, 368
  exponentiation, 369
  multiplication, 366, 481–482,
    485–504
  radix conversion, 369
  reciprocal, 357–364, 368
arithmetic series, 49
asymptotic notation
  \( O \), 58
  limits and, 91–93
  multiple variables, 81–88
  \( o \), 88
  \( \Omega \), 61
  \( \omega \), 88
operations using, 65–67
  properties, 59–60, 62–64, 91,
    97–103
recurrences and, 67, 73–79
summations and, 68
\( \Theta \), 62
Bachman, P. G. H., 103
Bayer, R., 242, 243
Bellman, R. E., 412
Bentley, J. L., 24, 373
Berge, C., 468
big-Oh, 58
big-Omega, 61
big-Theta, 62
bin packing problem, 558, 570–574, 585
binary search, 149–152
binomial coefficients, 241
binomial theorem, 241
bitonic tour, 411
Blum, M., 373
Boehm, E. M., 288
BOOL, 124
boolean expressions
  conjunctive normal form, 517
  DeMorgan's laws, 518
  \( k \)-conjunctive normal form, 522
  literal, 517
  satisfiability, 508–523, 539–553
  not all equal, 554
  validity, 509
