

Table of Contents

Preface *i*

Chapter 1: Computers and Programming 1

- 1.1 What is a Computer? 1
- 1.2 Computer Programming 2
- 1.3 Programs Are Objects 5
- 1.4 Operating Systems and Windows 6
- 1.5 Software Architecture 8
 - 1.5.1 Class Diagrams 9
- 1.6 Summary 11
- 1.7 Beyond the Basics 13
 - 1.7.1 Stepwise Refinement 14
 - 1.7.2 Object-Oriented Design 15
 - 1.7.3 Classes Generate Objects 17
 - 1.7.4 Frameworks and Inheritance 18

Chapter 2: Simple Java Applications 20

- 2.1 An Application and its Architecture 20
- 2.2 How to Build and Execute an Application 23
 - 2.2.1 Using an IDE 23
 - 2.2.2 Using the JDK 28
- 2.3 How the Application Works 30
 - 2.3.1 An Execution Trace of the Application 33
- 2.4 How One Object Constructs Another 35
- 2.5 Repairing Compiler Error Messages 41
- 2.6 Summary 43
- 2.7 Programming Exercises 46
- 2.8 Beyond the Basics 47
 - 2.8.1 Syntax 47
 - 2.8.2 Semantics 49

2.8.3 Java Packages 51

2.8.4 Java API 51

Chapter 3: Arithmetic and Variables 56

3.1 Integer Arithmetic 57

3.2 Named Quantities: Variables 59

3.2.1 Variables Can Vary: Assignments 63

3.3 Arithmetic with Fractions: Doubles 68

3.4 Booleans 72

3.5 Operator Precedences 74

3.6 Strings, Characters, and their Operations 75

3.7 Data-Type Checking 80

3.8 Input via Program Arguments 83

3.8.1 Converting between Strings and Numbers and Formatting 86

3.8.2 Temperature Conversion with Input 88

3.9 Diagnosing Errors in Expressions and Variables 92

3.10 Java Keywords and Identifiers 95

3.11 Summary 95

3.12 Programming Projects 97

3.13 Beyond the Basics 102

3.13.1 Longs, Bytes, and Floats 102

3.13.2 Helper Methods for Mathematics 103

3.13.3 Syntax and Semantics of Expressions and Variables 105

Chapter 4: Input, Output, and State 107

4.1 Interactive Input 108

4.1.1 Dialog Output 112

4.2 Graphical Output 113

4.2.1 Panels and their Frames 113

4.2.2 Customizing Panels with Inheritance 115

4.3 Format and Methods for Painting 122

4.3.1 Constructor Methods and `this` Object 124

4.4 Objects with State: Field Variables 130

4.4.1 Using Fields to Remember Inputs and Answers	135
4.4.2 Scope of Variables and Fields	140
4.5 Testing a Program that Uses Input	142
4.6 Summary	144
4.7 Programming Projects	147
4.8 Beyond the Basics	151
4.8.1 Scope of Variables and Fields	151
4.8.2 Partial API for <code>JFrame</code>	152
4.8.3 Methods for <code>GregorianCalendar</code>	152
4.8.4 Colors for Graphics	152
5.8.5 Applets	153
Chapter 5: Component Structure: Method and Class Building	157
5.1 Methods	158
5.2 Public Methods	159
5.2.1 Basic Public Methods	160
5.2.2 Constructor Methods	164
5.3 Parameters to Methods	168
5.3.1 Forms of Parameters	173
5.4 Case Study: General Purpose Output Frame	179
5.5 Results from Methods: Functions	186
5.6 Private Methods	193
5.7 Summary	200
5.8 Programming Projects	203
5.9 Beyond the Basics	212
5.9.1 Naming Variables, Methods, and Classes	212
5.9.2 Generating Web Documentation with <code>javadoc</code>	213
5.9.3 Static Methods	217
5.9.4 How the Java Compiler Checks Typing of Methods	220
5.9.5 Formal Description of Methods	221
5.9.6 Revised Syntax and Semantics of Classes	227
Chapter 6: Control Structure: Conditional Statements	229

6.1	Control Flow and Control Structure	230
6.2	Conditional Control Structure	231
6.2.1	Nested Conditional Statements	235
6.2.2	Syntax Problems with Conditionals	240
6.3	Relational Operations	241
6.4	Uses of Conditionals	245
6.5	Altering Control Flow	249
6.5.1	Exceptions	250
6.5.2	System Exit	251
6.5.3	Premature Method Returns	252
6.6	The Switch Statement	252
6.7	Model and Controller Components	255
6.7.1	Designing an Application with a Model-View-Controller Architecture	257
6.8	Case Study: Bank Accounts Manager	259
6.8.1	Collecting Use-Case Behaviors	259
6.8.2	Selecting a Software Architecture	261
6.8.3	Specifying the Model	261
6.8.4	Writing and Testing the Model	261
6.8.5	Specifying the View Components	265
6.8.6	A Second Look at the Software Architecture	265
6.8.7	Writing the View Classes	265
6.8.8	Controller Construction and Testing	272
6.8.9	Testing the Assembled Application	276
6.8.10	Multiple Objects from the Same Class	277
6.9	More about Testing Methods and Classes	283
6.9.1	Testing Individual Methods	283
6.9.2	Testing Methods and Attributes Together	283
6.9.3	Testing a Suite of Methods	284
6.9.4	Execution Traces	285
6.10	Summary	286
6.11	Programming Projects	290
6.12	Beyond the Basics	295
6.12.1	The Logic of the Conditional Statement	295

6.12.2 Interface Specifications and Integration 300

Chapter 7: Patterns of Repetition: Iteration and Recursion 304

7.1 Repetition 305

7.2 While Loops 306

7.3 Definite Iteration 308

7.3.1 Definite-Iteration Example: Painting a Bulls-Eye 153

7.4 Nontermination 319

7.5 Indefinite Iteration: Input Processing 321

7.5.1 Indefinite Iteration: Searching 324

7.6 For-Statements 328

7.7 Nested Loops 329

7.8 Writing and Testing Loops 335

7.9 Case Study: Bouncing Ball Animation 338

7.10 Recursion 347

7.10.1 An Execution Trace of Recursion 352

7.11 Counting with Recursion 356

7.11.1 Loops and Recursions 359

7.11.2 Counting with Multiple Recursions 360

7.12 Drawing Recursive Pictures 363

7.13 Summary 366

7.14 Programming Projects 370

7.15 Beyond the Basics 378

7.15.1 Loop Termination with `break` 379

7.15.2 The `do-while` Loop 380

7.15.3 Loop Invariants 381

7.15.4 Loop Termination 386

7.15.5 More Applets 387

Chapter 8: Data Structure: Arrays 391

8.1 Why We Need Arrays 392

8.2 Collecting Input Data within Arrays 396

8.3	Translation Tables	399
8.4	Internal Structure of One-Dimensional Arrays	402
8.5	Arrays of Objects	406
8.6	Case Study: Databases	3409
8.6.1	Behaviors	412
8.6.2	Architecture	413
8.6.3	Specifications	413
8.6.4	Implementation	415
8.6.5	Forms of Records and Keys	420
8.7	Case Study: Playing Pieces for Card Games	424
8.8	Two-Dimensional Arrays	431
8.9	Internal Structure of Two-Dimensional Arrays	434
8.10	Case Study: Slide-Puzzle Game	437
8.11	Testing Programs with Arrays	446
8.12	Summary	448
8.13	Programming Projects	450
8.14	Beyond the Basics	458
8.14.1	Sorting	458
8.14.2	Searching	462
8.14.3	Time-Complexity Measures	465
8.14.4	Divide-and-Conquer Algorithms	469
8.14.5	Formal Description of Arrays	477
Chapter 9:	Programming to Interfaces	483
9.1	Why We Need Specifications	484
9.2	Java Interfaces	485
9.2.1	Case Study: Databases	493
9.3	Inheritance	497
9.4	Reference Types, Subtypes, and <code>instanceof</code>	500
9.5	Abstract Classes	508
9.5.1	Case Study: Card Players	509
9.5.2	Class Hierarchies	516
9.5.3	Frameworks and Abstract Classes	519

9.6	Subtypes versus Subclasses	519
9.7	<code>class</code> <code>Object</code> and Wrappers	520
9.8	Packages	522
9.8.1	Generating Package APIs with <code>javadoc</code>	524
9.9	Case Study: An Adventure Game	526
9.9.1	Interfaces and Inheritance Together	532
9.9.2	Inheritance of Interfaces	539
9.10	Summary	539
9.11	Programming Projects	543
9.12	Beyond the Basics	544
9.12.1	Subclasses and Method Overriding	545
9.12.2	Semantics of Overriding	550
9.12.3	<code>final</code> components	555
9.12.4	Method Overloading	556
9.12.5	Semantics of Overloading	561
Chapter 10:	Graphical User Interfaces and Event-Driven Programming	564
10.1	Model-View-Controller Revisited	565
10.2	Events	567
10.3	The AWT/Swing Class Hierarchy	568
10.4	Simple Windows: Labels and Buttons	571
10.5	Handling an Event	579
10.5.1	A View as Action Listener	579
10.5.2	A Separate Controller	583
10.5.3	A Button-Controller	583
10.6	Richer Layout: Panels and Borders	590
10.6.1	An Animation in a Panel	594
10.7	Grid Layout	600
10.8	Scrolling Lists	604
10.9	Text Fields	610
10.10	Error Reporting with Dialogs	617
10.11	TextAreas and Menus	620
10.11.1	Case Study: Text Editor	623

10.12	Event-Driven Programming with Observers	632
10.12.1	Observers and the MVC-Architecture	635
10.13	Summary	636
10.14	Programming Projects	641
10.15	Beyond the Basics	645
10.15.1	Applets	646
10.15.2	Tables and Spreadsheets	649
10.15.3	Handling Mouse Clicks and Drags	655
10.15.4	Threads of Execution	664
10.15.5	GUI Design and Use-Cases	669
10.15.6	Summary of Methods for Graphical Components	671

Chapter 11: Text and File Processing 680

11.1	Strings are Immutable Objects	681
11.1.1	String Tokenizers	683
11.2	Sequential Files	686
11.2.1	Output to Sequential Files	688
11.2.2	Input from Sequential Files	690
11.3	Sequential Input from the Command Window	692
11.4	Case Study: Payroll Processing	695
11.5	Exceptions and Exception Handlers	700
11.5.1	Restarting a Method with an Exception Handler	702
11.5.2	Interactive Input with Exception Handlers	705
11.6	Exceptions Are Objects	706
11.6.1	Programmer-Generated Exceptions	713
11.7	Summary	714
11.8	Programming Projects	716
11.9	Beyond the Basics	719
11.9.1	Character-by-Character File Processing	719
11.9.2	Binary Files and Files of Objects	720
11.9.3	A Taxonomy of File Classes	721
11.9.4	A GUI for File Selection	730

Appendix I:Java Language Definition 724

Appendix II:Types and Subtypes 741

Appendix III:Class Diagrams 744
